BAGASSE FOOD CONTAINERS

Bagasse is a renewable, fiber-based material made from sugarcane residue, a practical alternative to conventional plastic and tree-based disposable packaging. Ekoroll's bagasse containers are designed for foodservice, takeaway, delivery and catering applications where sustainability, strength and commercial performance matter.

Depending on the final product specification and local waste-management infrastructure, bagasse products can support compostable packaging strategies through suitable commercial composting systems.

Designed for hot and cold food applications, selected bagasse containers may be suitable for microwave reheating, freezer storage and short-term food holding, while maintaining reliable performance during service.

Their fiber-based structure provides rigidity and resistance to everyday handling, helping the container remain stable and presentable from preparation to consumption.

KEY BENEFITS

- Strong, rigid and lightweight fiber structure
- Suitable for both hot and cold food service
- Oil and moisture resistance (varies by product type)
- Leak-resistant and taste-neutral performance
- Microwave and freezer suitability
- Compostability documentation on project confirmation

ENGINEERED TO SEAL, NOT LEAK

Leak-resistant bagasse, engineered and produced in-house by Ekoroll.

Most fiber bowls leak with soups, curries and sauces. The Ekoroll Anti-Leak Series is engineered to prevent that — a precision-formed rim and matched lid keep liquid-rich meals secure through stacking, transport and delivery.

BUILT TO YOUR SPECIFICATION

Ekoroll is not limited to a fixed catalogue. When the product you need doesn't exist yet, we build it. Our custom tooling capability lets distributors and brands develop new bagasse containers — new shapes, sizes, volumes and compartment, engineered around a specific application.

Custom Tooling & Mold Development

We design and produce dedicated molds for new bagasse formats, turning a concept — or an existing sample — into a production-ready product.

Made-to-Spec Sizes & Volumes

Dimensions, depth, volume, wall thickness and compartment layout are developed to match your exact portion and operational requirements.

New Product Concepts

Bowls, trays, clamshells, multi-compartment and application-specific formats — developed from the ground up.

From Concept to Container

Design, mold-making, sampling, validation and scaled production, managed as one coordinated process.

“ If It Can Be Formed In Fiber,
Ekoroll Can Develop It,
Your Specification,
Your Mold, Your Product. ”

HOW TO REQUEST A QUOTATION

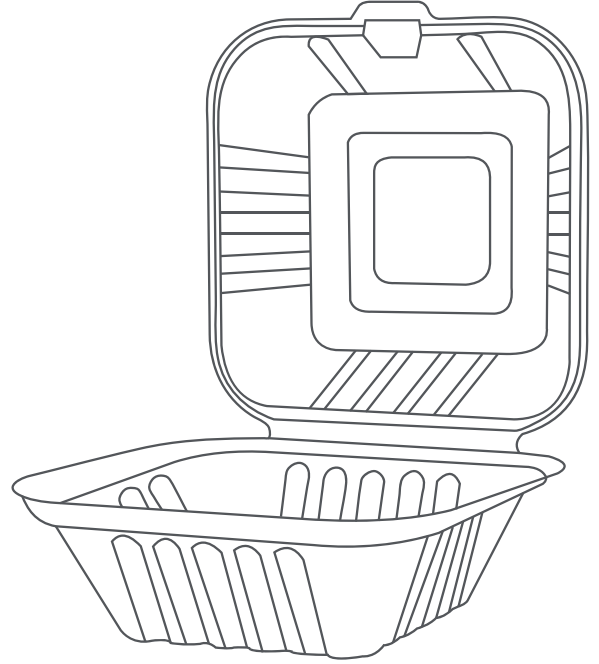

To prepare an accurate commercial offer, please share:

1. Required product SKUs or reference images
2. Quantity per item
3. Destination country, city or port
4. 20FT, 40HQ or mixed-container requirement
5. Required certificates or compliance documentation
6. Sample request, if needed

Send us your product list and estimated volume. Our team will prepare the most suitable commercial proposal for your project.

Certification documentation is available depending on final product specification and production route.
